

## US Continental Earns ISO Certification

November 18, 2013

US Continental is proud to announce that our manufacturing facility in Corona, California is now certified as an ISO 9001:2008 and 14001:2004 Registered Firm.

ISO 9001:2008 certification recognizes that the policies, practices and procedures of our company ensure consistent quality in the product and services we provide our customers. To earn the certification, our company underwent a rigorous evaluation process that included quality management system development, a management system documentation review, and an extensive pre-audit. All culminating in a final audit and award of our certification.

All the hard work doesn't end there, however. To maintain our certification, we are required to constantly monitor, improve and update our quality management programs and continually educate our staff on quality management procedures.

ISO 14001:2004 identifies requirements for our environmental management system, and it supports our policies regarding critical environmental issues. As part of our Eco-Friendly policy, this certification underscores our commitment to a healthy and safe manufacturing facility as well as a cleaner and better environment.

These are just two examples of the forward-thinking paradigms at US Continental. From our Eco-Friendly products, to our reduced reliance on electricity through use of state-of-the-art pneumatic equipment, we constantly strive to improve upon every aspect of our business. It's simply a part of our unwavering commitment in providing products which are "Perfect In Every Package."
